

User Stories: Bad vs Good Comparison

Bad ❌	Good ✅
"As a user, I want to interact with the pet."	"As a lonely office worker working late shifts, I want the pet to react to my taps, shakes, tilts, and loud noises with specific expressions (smile, dizzy, scared), so that I have a responsive, playful companion that eases my loneliness without needing my full attention."
"As a user, I want to see data on the screen."	"As an international student living in a dorm without a thermometer, I want the pet to display real-time temperature and humidity on its screen, so that I can quickly check my room's comfort without grabbing my phone."
"As a user, I want the pet to have idle animations."	"As a busy office worker who leaves the pet on my desk, I want it to play soft looping idle animations when I'm not interacting with it, so that it feels alive and friendly even when I'm focused on work."
"As a user, I want to talk to the pet."	"As an international student feeling homesick at night, I want to press a single key to start voice interaction with the pet, so that I can chat casually and ease loneliness without complex setup."
"As a user, I want to control the pet with my phone."	"As a friend visiting my dorm, I want to scan a QR code on the pet to control its expressions remotely via a simple web page, so that I can play with my friend's pet together even when sitting across the room."
"As a user, I want to see the weather on the pet."	"As an office worker who often forgets to check the forecast, I want the pet to show local time and real-time weather on its screen, so that I can quickly plan my commute without opening my phone."
