

XJTLU Entrepreneur College (Taicang)

Module Code and Title	ENT208TC Industry Readiness
School Title	XJTLU Entrepreneur College (Taicang)
Assignment Title	Project Brief
Submission Deadline	Friday March 27, 2026 before 23:59 (Beijing Time, GMT+8)
Session and Group	Session 2 — Group 8
Student IDs	2360724, 2362966, 2360759, 2361273, 2255187, 2362906, 2362677
Final Word Count	
If you agree to let the university use your work anonymously for teaching and learning purposes, please type “yes” here.	

I certify that I have read and understood the University's Policy for dealing with Plagiarism, Collusion, and the Fabrication of Data (available on Learning Mall Online). With reference to this policy, I certify that:

- My work does not contain any instances of plagiarism and/or collusion. My work does not contain any fabricated data.

By uploading my assignment onto Learning Mall Online, I formally declare that all of the above information is true to the best of my knowledge and belief.

Scoring — For Tutor Use							
Student ID	2360724, 2362966, 2360759, 2361273, 2255187, 2362906, 2362677						
Stage of Marking	Marker Code	Learning Outcomes Achieved (F/P/M/D)					Final Score
		A	B	C	D	E	
1st Marker — red pen							
Moderation — green pen	IM Initials	The original mark has been accepted by the moderator: Y / N					Y / N
2nd Marker if needed

Section 1 — The Problem

Many people crave the companionship and emotional comfort that pets bring, but cannot own real pets due to busy schedules, rental restrictions, allergies, or financial constraints. They often turn to static virtual pets or simple mobile games for a substitute, but these options lack real-time interaction and emotional feedback. Unlike real pets, existing virtual alternatives do not respond to users' actions, voices, or moods, failing to create a genuine sense of connection. This leaves users feeling unfulfilled, as the one-sided interaction does not alleviate loneliness or satisfy their desire for nurturing and companionship.

Section 2 — Target Users

They are loners who are delicate and not good at taking the initiative to socialize — when alone, they take off their fatigue first after getting off work, and are used to relieving loneliness by talking to themselves, but never want to trouble others. They value sincere emotional responses, long to be listened to and cared for, and yearn for the warmth of pet companionship but are restricted by reality. Traditional virtual pets lack emotional feedback and cannot respond to their whispers, so they urgently need this companion product that can establish emotional connections.

Section 3 — The Solution

We are developing an interactive electronic pet, a low-maintenance, warm companion that eases loneliness and fits my daily needs. It has a realistic standby state with natural blinking, making it feel like it's always by my side. Pressing a button or shaking it changes its expression to respond to my interaction. Additionally, it reminds me of the weather and temperature in my city to help me prepare for going out, and can set a countdown timer to remind me to get up and move after sitting too long. It solves the problem of traditional virtual pets lacking interaction and practical value, allowing me to get emotional companionship and practical convenience without the pressure of raising a real pet.

Key Features

- Standby blinking action — Blinks naturally in standby mode for a realistic, present companion feeling.
- Expression interaction — Press a button or shake the device to make it switch between different expressions.
- Weather and temperature reminder — Notifies you of the weather and temperature in your current city.
- Countdown timer — Sets a sedentary reminder to prompt you to get up and move regularly.

Section 4 — Success Metrics

We will measure success with these specific, testable outcomes:

- Usability: 90% of users can complete their first interaction (voice/touch response) within 3 minutes of opening the product.
- Adoption: 70% of users use the product at least 5 times per week, with each session lasting 10+ minutes.
- Testable: 85% of users rate the “emotional connection” score 8/10 or higher in post-test surveys.
- Retention: 65% of users remain active 30 days after their first use.
